

Single head

for nut or 30 mm wide stripes

Combined head (for instance 100 mm)

Single nozzles can be combined to arbitrary widths

Combinations

Single- and multi-heads can be combined arbitrarily, so that profiles of arbitrary geometry can be treated. The heads can be operated separately or together with one generator.

Highlights:

- potential-free atmospheric pressure plasma
- „cold“, since plasma production without thermal arcs
- high efficient, soft treatment
- for plastics, metals and other
- removes dust
- removes charges
- compact design (70 mm deep)
- operation with standard pressurized air from the net
- no mechanical wear parts

Effect:

- Removal of adherent layers
- Oxidation of substrate
- Improvement of wettability and adherability
